Download results (Excel)

How to use

Please see my if you want github to get more information :
<https://github.com/Tomoyoshi-Kaneko/susiR/tree/main>

Access here to use the web application:

<https://01a0aedc-8749-7813-9276-04c501bdd47d.share.connect.posit.cloud/>

1. upload your data from here
2. Load the placement of your sample. The way of this is either: write in another sheet of the excel, or write directly here.
- If several sheets exists, then the app automatically distinguish the OD sheet.
3. Push the button ("Run analysis") shown at the bottom.

susiR — phage lytic activity analysis

Don't have an R / name sheet yet? Convert a raw plate-reader export ▾ click to expand / collapse

Export settings: image size & PNG/SVG format ▾ click to expand / collapse

File-reader workbook (.xlsx)

Browse...

No file selected

Requires two sheets: an OD time-course (time x well) and a sample-mapping table (one row per well, with a condition label for each).

☐ Advanced: sheet / column names

☐ Analyze in separate groups (e.g. different hosts/strains sharing this sheet)

Aggregation level

Global VI / MV50

An alternative to preparing a 'name' sheet in Excel: click-and-drag across the grid below to select a range of wells, type a label, and press Ctrl+Enter to fill the whole selection at once (standard spreadsheet behavior). Wells greyed out aren't present in the OD sheet currently selected under Advanced settings. Only wells you fill in the 'Sample / condition' grid are included -- leave a well blank to exclude it.

Sample / condition (required)

Group (optional -- e.g. host/strain)

Biological replicate (optional)

Build mapping from grid and use it below

You can adjust these parameters if you want

Run analysis

Take T1 phage for example

Please see my if you want github to get more information :
<https://github.com/Tomoyoshi-Kaneko/susiR/tree/main>

You can get the example data from here:

https://github.com/Tomoyoshi-Kaneko/susiR/raw/refs/heads/main/inst/extdata/T1_rawdata.xlsx

You can also exclude specific data.

R

Global VI / MV50

An alternative to preparing a 'name' sheet in Excel: click-and-drag across the grid below to select a range of wells, fill the whole selection at once (standard spreadsheet behavior). Wells greyed out aren't present in the OD sheet cu settings. Only wells you fill in the 'Sample / condition' grid are included -- leave a well blank to exclude it.

Determining which wells exist by reading OD sheet: 'R' (this only checks which wells have data, to grey out the rest sample names).

Sample / condition (required)

Group (optional -- e.g. host/strain)

Biological replicate (optional)

You can group by your preferable criteria (ex. host)!

4

How to use

You can change the ratio of width and height of exported fig.
If the number of the groups was too much and , and it fail to draw the curves, then widen the height and you'll see the curve

Also, you can unify your curves

How to use

From “Metrics summary” tab, you can get the fig of each metrics summary like this. Each color dots (red, green, or blue) shows raw data, in other words, calculated data from each well. Black diamond shows the data calculated on averaged OD data.

Also, you can export the detail data as an excel file.
